Companion planting chart uk pdf 2019 free online pdf

Companion planting chart alberta. Companion gardening chart pdf. Companion planting chart west coast seeds. Companion planting chart canada.

Lettuce, radishes, and other quick-growing plants sown between hills of melons or winter squash will mature and be harvested long before these vines need more leg room. TOMATOES Asparagus Basil Borage Calendula Dill Garlic Nasturtium Onion Parsley Thyme Calendula deters general garden pestsAsparagus repels nematodes.Basil repels whiteflies, mosquitoes, spider mites, aphids. ZUCCHINI/ SUMMER SQUASH Buckwheat Oregon Nasturtium Zinnia Buckwheat brings in pest predators which reduce insect pests. Note: traditional seeds were different than today's seeds. Shade regulation: Large plants provide shade for smaller plants in need of sun protection. Similarly, plants with long taproots, like burdock, bring up nutrients from deep in the soil, enriching the topsoil to the benefit of shallow-rooted plants. Weed suppression: Planting sprawling crops like potatoes with tall, upright plants minimizes open areas, where weeds typically take hold. To attract pollinators, plant oregano and zinnias.Nasturtium protects against aphids and whiteflies. Tell us in the comments below! BONUS: You'll also receive our free Beginner Gardening Guide! Basil improves the growth and flavor of tomatoes and peppers. BASIL Peppers Purslane Tomatoes Purslane is used to shade the soil around basil plants, helping them to remain fresh in hot weather. Grow the right plants together and you can reap benefits including better growth and reduced pests. In our latest update, we've added to our "Evidence-Based Companion Planting Guide" with a fantastic new video revealing the top proven companion planting pairs. It's where you grow it—and the company it keeps. Correct spacing, sun, water, and good soil management are the most important influences on your growing. Over time, as we've gathered more scientific evidence, we've evolved our thinking on the best companion planting combinations. The selection bar will then show only those plants that your chosen crop will love. They also all like lime added to the soil. Check it out! Friends can offer support and help protect you from some of the bad stuff out there. CARROTS Chives Leeks Onions Peas Radishes Rosemary Sage Chives improve the growth and flavor of carrots and deter aphids, mites, and flies.Rosemary and sage repel carrot fly.Leeks are thought to repel many flying pests (including carrot rust fly).Foes: Dill can reduce the yield of carrots. Image: Vegetable garden using companion planting practices.3 Updates to Our Companion Planting Philosophy The Old Farmer's Almanac has practiced Companion Planting for over a century, based on time-honored wisdom. Mint deters aphids, ants, and flea beetles. In terms of companion planting, just start small with a few marigolds and zinnia seeds—and watch the beneficial bugs come! Other options to start with? Credit: Catherine BoeckmannCompanion Planting Chart: 20 Common Vegetables In this chart, you'll find some of the most common garden crops and their suitable companion plants. For more plants, we'd point you to the online Almanac Garden Planner, which has a large database of companion plants and a new companion planting feature that makes it easier than ever for you to find perfect matches for your plants. Simply select a garden vegetable on the screen and then click the 'Show Companions' button, and ... the selection of plants is filtered to show only those plants that grow especially well with your chosen vegetable! For example, if you select sweet corn, and click on the Companion Plantings button, it shows that beans are a great companion! Learn more about the Garden Planner. POTATOES Basil Beans Calendula Catmint Cilantro Garlic Horseradish Oregon Peas Tansy Beans can improve the size of potato tubers.Cilantro protects against aphids, spider mites and potato beetles.Calendula, tansy, and horseradish planted at the corner of a potato patch wards off Colorado potato beetles. BEETS Brassicas Bush beans Garlic Lettuce Onion family Beets are companions for chicory and endive.Onions protect against borers and cutworms. PEAS Alyssum Carrot Chives Corn Grapes Lettuce Mint Radish Spinach Turnip Chives deter aphids.Mint improves health and flavor.Alyssum brings in pollinators and encourages green lacewings, which eat aphids.Foes: Do not plant near garlic and onion, as they will stunt the growth of peas PEPPERS Basil Marjoram Onions Oregon Herbs like basil, oregano, and marjoram have a protective, insecticidal quality. LETTUCE Chives Onions Oregon Peas Poached Egg plants Radishes Scallions Zinnia Chives, onions, and garlic deter aphids and other pests by masking the scent of the lettuce with their aroma.Basil is thought to improve the flavor and growth of lettuce.Radishes can be used as a trap crop for flea beetles.Poached egg plants (Limnanthes), a wildflower, will bring hoverflies and other beneficials that eat aphids. Tansy also deters ants, beetles, bugs, flying insects, as does borage, improving flavor and growth. Tansy is a perennial, which means you only have to plant it once. For example, corn shades lettuce. BROCCOLI Oregon Other Brassicas (Cabbage, brussels sprouts, cauliflower, etc.) Oregon has insecticidal properties. Borage pairs well with tomatoes, attracting pollinating bees. CORN Beans (pole) Cucumbers Dill Melons Peas Squash Sunflower Dill is thought to protect against aphids and mites.Beans can provide more nitrogen to the corn.Sunflowers can act as a structure and a windbreak for the corn, and dwarf sunflowers bring in ladybugs to control aphids.Pole beans are sometimes interplanted with corn, adding nitrogen and providing structural support.Spinach grows well in the shade of corn, keeping corn roots cool. Leafy greens like spinach and Swiss chard will grow in the shadow of corn. (Simply select a crop, then click on the heart-shaped Companion Planting button. Image: Dill attracts beneficial ladybugs, which eat aphids. Natural supports: Tall plants, like corn and sunflowers, can support lower-growing, sprawling crops such as cucumbers and peas. Just be careful to plant mint nearby in its own pot or bed, as it is a very aggressive grower! Nasturtiums attract hungry caterpillars away from brassicas like cabbage and broccoli and kale, so grow these pretty flowers close to those crops; nasturtium also lure blackfly away from fava beans. Basil repels certain insect pests such as thrips and have also been shown to disorient the moths which lay tomato hornworms. Also plant it around a cabbage patch to reduce injury from cabbage moths. CABBAGE Garlic Nasturtium Sage Nasturtiums deter insect pests such as beetles and aphids.Garlic planted alongside cabbage repels insects with its odor.Sage deters cabbage moth. Sunflowers pair well with cucumbers and pole beans; Sunflowers help provide support for climbing plants, as well as shade for crops which, in hotter climates, can become sun-stressed. (Note: Tansy is considered invasive in some areas. Image: Nasturtium planted next to netted cabbage. Bottom-line: there is simply more evidence for "good" companions than "bad" ones, so we now focus more on why vegetables need friends! There are misconceptions about companion planting on the internet, which we found concerning. Many examples of companion planting were based folklore or hearsay. Attracting beneficials: Some plants also attract beneficial insects. What's your go-to pairing? Parsley attracts beneficial insects to protect and pollinate tomatoes. Just Start Small! Don't get too fixated with pairing up crops. For example, garlic's smell is unappealing to many pests. Improving soil fertility: Some crops, like beans, peas, and other legumes, help to make nitrogen more available in the soil. Bush beans tolerate the dapple shade that corn casts and, since their roots occupy different levels in the soil, don't compete for water and nutrients. Their aroma disorients pests.Onions benefit from marigolds as the smell of marigolds reduces the egg laying of onion maggot fly. While traditionally, companion planting referred to vegetable plant pairs, we've added more flowers to our chart; many are excellent natural insect repellents. Tansy is a real draw to pest-eating bugs such as ladybugs or ladybirds, and predatory wasps. And we also love marigolds for drawing in those pest-hungry beneficial bugs. How about calendula, nasturtium, basil, and borage? Not only will these flowers reduce your pest population but you will enjoy watching the bees, butterflies, and hummingbirds visit your garden! Learn More Have you tried companion planting? Plant Brassicas together so that they can all be covered with nets to protect from pests such as cabbageworm. That could be as simple as growing nectar-rich flowers among crops to attract pollinators or two vegetables grown side by side to confuse or repel pests. A familiar example of companion planting is the Three Sisters trio—maize, climbing beans, and winter squash—which were commonly planted together by various Native American communities due to the plants' complementary natures: the tall corn supports climbing beans, the low-growing squash shades the ground to prevent moisture loss and its big, prickly leaves discourage weeds and pests; and the fast-growing beans are 'nitrogen fixers' which make nitrogen available to other plants. Here's a little secret: It's not just what you grow. Traditionally, it was thought that vegetables had "friends" and "foes"—companion plants that either benefitted the 'vegetables' growth or impeded it. What more could you want in a garden flower! Add more flowers! Growing calendula or cosmos nearby will attract tiny parasitizing wasps to aphid-hungry hoverflies. WINTER SQUASH and PUMPKINS Beans (pole) Buckwheat Calendula Corn Marigolds Nasturtium Oregon Buckwheat brings in pest predators which reduce insect pests.Nasturtiums protect against pumpkin and squash beetles.Oregano provides general pest protection.Calendula deters beetles and root nematodes.Squash is traditionally planted with corn and beans ("three sisters") to disorient the adult vine borer. More Companion Gardening Tips Much of companion planting considers the height of different vegetables. Dill attracts ladybugs, which eat small garden pests such as aphids and spider mites. Select one and drop it into your garden plan.) Companion Planting Chart Crop Name Companions Benefits and Notes ASPARAGUS Calendula Petunias Tomatoes Calendula, tomatoes, and petunias are thought to deter asparagus beetles. So the benefit could go one way or be mutual. This isn't necessary wrong, but we've found that nearly all the associations are positive ones; there are perhaps 2 or 3 "bad" combinations (e.g., black walnut trees, which secrete growth inhibitors through their roots). ONIONS Beets Cabbage Carrot Chard Lettuce Strawberry Tomatoes Onions protect against borers and cutworms. Researchers also found that interplanting tomatoes with basil resulted in less egg-laying by armyworms. Beets adds minerals to the soil, as beet leaves are composed of 25% magnesium. RADISHES Chervil Lettuce Nasturtium Peas Chervil improves growth and flavor.Nasturtiums are a good trap crop for radishes.Radishes are often used as trap crops for flea beetles.Peas give nitrogen to the soil which benefits radishes. Nasturtium is heads and shoulders above them all, taking the brunt of pest attacks. SPINACH Beans Cilantro Eggplant Oregon Peas Rosemary Strawberries Peas and beans provide natural shade for spinach.Cilantro, oregano, and rosemary is thought to repel insects. At the same time, tansy repels many of the common baddies such as cutworm which attacks asparagus, bean, cabbage, carrot, celery, corn, lettuce, pea, pepper, potato, and tomato plants. Our team has spent many months—years even—trawling through much of the peer-reviewed research in this area, exhaustively working out what is proven, and what's not. How to Plan a Garden With Companion Plants Come along with Ben into the garden as he uses proven techniques to plan out his companion planting combinations for the coming season! A Companion Planting Tool All of this companion planning information is well and good but, honestly, who has the time to research scientifically rigorous companion planting combinations? See local guidelines before planting.)Catmint also repels Colorado potato beetles, but can bring cats into the vegetable garden, so it is a good idea to plant it in pots around the edge of the plot. Plant these herbs between tomatoes. CUCUMBERS Beans Borage Dill Lettuce Nasturtiums Oregon Radish Sunflowers Tansy Dill is thought to protect against aphids and mites.Nasturtium deters aphids, beetles and bugs and improves growth and flavor.Oregano deters pests in general.Radish, Nasturtium, and Tansy repel cucumber beetles; radish also repels flea beetles. Your plants know this too! Companion planting is simply when two plants are grown close together for the benefit of one or both of those plants. (See more below.) Of course, any nectar-rich flowers such as zinnia, comfrey and ageratum will attract pollinators such as bees to the garden, helping to boost the pollination of flowering crop plants like tomatoes, beans, and squash. Aphids (which affect more than 400 plants) can't stand garlic! Garlic also repels onion flies, ermine moths, and Japanese beetles. Basil also attracts bees, which improves pollination, tomato health, and flavor. Improved plant health: When one plant absorbs certain substances from the soil, it may change the soil biochemistry in favor of nearby plants. Three Sisters technique. Plant between rows of potatoes, alongside lettuces and cabbages and near fruit trees. While observations in our own garden can be valuable, we decided that our reference guide should only highlight companion plant pairings backed up by scientific evidence and tried-and-true practices. For example, borage attracting pollinating bees and tiny pest-eating wasps. (See more in the chart below.) Basil and tomatoes are not only companions in the kitchen but also best friends in the garden. Garlic and garlic spray has a strong scent deters many insects. See recommended varieties to plant.7 Benefits of Companion Planting There are plenty of good reasons to plant certain crops together: Detering pests: Certain plants act as insect repellents or deter critters. This is the reason we have our Garden Planner. BEANS Beets Corn Lovage Nasturtium Rosemary Squash Strawberries Sunflower Nasturtiums can be used as a trap plant to entice aphids away from beans.Lovage and rosemary also have excellent insect repellent qualities.Sunflowers can be used to create shade for sun-stressed crops.Corn will benefit from the beans' nitrogen-fixing capabilities. Pole beans provide structural support. Basil also attracts bees, which improves pollination, tomato health, and flavor.Borage repels hornworms.Dill makes it difficult for cutworms to lay their eggs and supports parasitic wasps that attack pest caterpillars.Thyme reduces egg laying by armyworms. Dill is also a food source for caterpillars and butterflies.Best Companion Planting Combinations Here are examples of some of the best companion planting combinations for your garden. Dill, coriander, and other members of the Carrot family should not be planted near carrots (they tend to cross pollinate). Poached egg plants (a wildflower) draws in hoverflies, which control aphids on nearby lettuce. Sage is a useful herb that repels carrot fly. Borage also pairs well with strawberries, enhancing their flavor and vigor. The result is the Garden Planner's Evidence-Based Companion Planting feature. We demonstrate the Companion Planting feature in the video above.
